ПОРЯДОК СЛОВ В ПРЕДЛОЖЕНИИ

Порядок слов в повествовательном утвердительном предложении

Для английского языка, в отличие от русского, характерен строго закрепленный порядок слов в предложении. Обычный порядок слов в повествовательном утвердительном предложении следующий: на 1-м месте – подлежащее, на 2-м – сказуемое, на 3-м – дополнение (а – косвенное, б – прямое, в – предложное), а на последнем – обстоятельство (а – образа действия, б – места, в – времени).

Прим. Обстоятельства времени и места могут стоять перед подлежащим. Такой порядок не изменит смысла предложения. Обстоятельства образа действия (такие, как often, seldom, never, just, already, never) часто стоят перед смысловым глаголом.

Ex. *He gave his brother the book in this room yesterday.*

he – подлежащее

gave – сказуемое

his brother – косвенное дополнение

the book – прямое дополнение

in this room – обстоятельство места

yesterday – обстоятельство времени

Главные члены предложения

Подлежащее может быть выражено:

Часть речи	Пример	Перевод
Существительное	The moon was rising in the sky.	В небе поднималась луна.
Местоимение личное указательное вопросительное неопределенное отрицательное	I know it perfectly well. That is the most difficult question. Who is it? What has happened? Someone told me that. Nothing has happened yet.	Я хорошо это знаю. Это самый трудный вопрос. Кто это? Что случилось? Кто-то мне об этом сказал. Еще ничего не случилось.
Субстантивированное прилагательное или причастие	The wounded was taken good care of. The whites have left the town.	За раненым хорошо ухаживали. Белые покинули город.
Числительное	The two were quite unable to do anything.	Эти двое ничего не могли сделать.
Инфинитив и инфинитивная группа	To be a rich man is not always beautiful.	Быть богатым не всегда хорошо.

Герундий или герундиальная группа	Lying doesn't go with me.	Ложь не для меня.
Придаточное предложение	What I want is to save us.	Что я хочу – так это спасти вас.

Сказуемое в английском языке бывает: *простое глагольное, составное глагольное и составное именное.*

I. Простое глагольное сказуемое может быть выражено:

1) Личным глаголом в любой видо-временной форме, залоге, наклонении.

He speaks English well. – Он хорошо говорит по-английски.

The translation has not been finished yet. – Перевод еще не закончен.

2) Фразеологическими оборотами, такими как: *to pay attention to, to make use of, to take part* и др.

She has never made use of her power. – Она никогда не пользовалась своей властью.

II. Составное глагольное сказуемое может быть выражено:

1) Сочетанием модальных глаголов (*can, may, must, should* и др.) с инфинитивом.

The lesson is to begin at 12 o'clock. – Урок должен начаться в 12 часов.

2) Сочетанием глаголов, обозначающих начало, конец или продолжение действия, таких как *to begin, to start, to end, to continue, to finish* и др. с инфинитивом или герундием.

She had stopped asking him about the time. – Она перестала спрашивать его, сколько времени.

III. Составное именное сказуемое выражается: сочетанием глагола-связки и именной части. Чаще всего в качестве глагола-связки используется глагол *to be*, однако в этой функции могут выступать глаголы *to become, to continue, to get, to go, to grow, to feel, to keep* и др.

Именная часть может быть выражена:

1. Именем существительным.

He is a teacher. – Он учитель.

2. Именем прилагательным.

This decision is possible. – Такое решение возможно.

3. Местоимением.

These houses are mine. – Эти дома мои.

4. Наречием.

The lesson is over. – Урок окончен.

5. Неличной формой глагола.

Our task is to study English. – Наша цель – выучить английский.

6. Предложными оборотами и словосочетаниями.

I am in a hurry. – Я спешу.

Синтаксическая структура предложения.

Иногда английское предложение невозможно понять и, следовательно перевести на русский язык, не сделав синтаксического разбора. Однако из-за отсутствия флексий и большого количества омонимичных грамматических форм это бывает непросто. Вам могут помочь следующие правила:

I. Попытайтесь найти главные члены предложения – подлежащее и сказуемое.

1. ПОМНИТЕ! В повествовательном предложении подлежащее стоит перед сказуемым, а дополнение – после него.

2. УЧТИТЕ! Местоимения в именительном падеже (I, we, she, he, they) всегда являются подлежащими. Личные формы глаголов *to be* и *to have*, модальные глаголы, сочетания со вспомогательными глаголами *shall*, *will* всегда выполняют функцию сказуемого.

3. Существительное с предлогом никогда не бывает подлежащим.

II. Обстоятельство нельзя спутать с подлежащим, т.к. оно

1. либо выражено существительным, и тогда перед ним всегда стоит предлог.

2. либо выражено наречием, что можно определить:

а) по наличию суффикса *-ly* (*slowly*- медленно);

б) по словарным пометам: *adv=adverb* – наречие.

Иногда в предложении бывает трудно найти определение и отличить его от подлежащего или дополнения. В английском языке определение может быть выражено практически любой частью речи и стоять как перед определяемым словом, так и после него. Однако, если определение выражено прилагательным, местоимением, наречием, причастием, герундием или инфинитивом, а определяемое слово – существительным, то их легко различить по форме или с

помощью словарных помет. Трудности возникают, когда определение тоже выражено существительным. Но и здесь возможны варианты.

1. Определение может быть выражено существительным в притяжательном падеже. Тогда оно стоит перед определяемым словом и имеет формальный признак – апостроф.

cat's milk – кошкино молоко.

2. Существительным с предлогом. Тогда определение всегда стоит после определяемого слова.

letter from her sister – письмо от сестры

a cup of tea – чашка чая

3. Самый трудный случай – когда определение выражено существительным в общем падеже и формально ничем не отличается от определяемого слова. В этом случае определение всегда стоит перед определяемым словом и переводится либо прилагательным, либо существительным в родительном падеже.

bus stop – автобусная остановка

Institute building – здание института

ЗАПОМНИТЕ! Определение и определяемое слово нельзя поменять местами. В противном случае изменится смысл. Например:

export oil – экспортная нефть

oil export – экспорт нефти

Иногда слово может определяться целой атрибутивной группой, состоящей из нескольких существительных и других частей речи. В любом случае определяемое слово всегда стоит на последнем месте, а все предшествующие – определения к нему.

the Liberal Party election campaign committee – комитет по проведению избирательной кампании либеральной партии.

Такие словосочетания очень распространены в английском языке. Для правильного перевода словосочетания необходимо проанализировать внутренние смысловые связи между его членами.

Двучленные словосочетания

Первый член двучленного словосочетания может переводиться на русский язык:

1) прилагательным;

emergency meeting *внеочередное заседание*

factory committees *фабричные комитеты*

2) существительным в родительном падеже;
wage rise *повышение зарплаты*
budget increase *увеличение бюджета*

3) существительным с предлогом;
strike warning *предупреждение о забастовке*
disarmament conference *конференция по разоружению*

4) приложением;
railway-engineer *инженер-железнодорожник*
woman-doctor *женщина-врач*

5) с помощью причастного оборота;
earth fuel *топливо, имеющееся в недрах земли*

6) прочими описательными средствами.
the idea man *человек, у которого родилась идея (мысль)*

Многочленные словосочетания

При переводе многочленных словосочетаний необходимо придерживаться следующей последовательности:

1) перевести определяемое существительное (последнее слово словосочетания);

2) проанализировать смысловые связи между членами словосочетания и разбить их на смысловые группы (слева направо);

3) перевести словосочетание, начиная с определяемого слова, и затем переводить каждую смысловую группу справа налево.

Например, словосочетание **Bank Credit Regulation Committee**. Переводим последнее слово *комитет*. Далее разбиваем все словосочетание на смысловые группы: **1. Bank Credit, 2. Regulation Committee**. Переводим *Комитет по регулированию банковских кредитов*.

Словосочетания могут начинаться прилагательным или причастием. В этом случае надо выяснить, к какому слову относится первый член словосочетания.

sudden policy change *внезапное изменение политики*

National Liberation Front successes *успехи национально-освободительного фронта*

В том случае, когда в начале словосочетания находится имя собственное, обозначающее географическое название, оно переводится на русский язык прилагательным, существительным в родительном падеже или существительным с предлогом (обстоятельство места).

London district committee *районный комитет Лондона*

Paris peace talks *мирные переговоры в Париже*

В том случае, когда в середине словосочетания находится причастие, оно переводится на русский язык существительным в родительном падеже.

fence-**mending** policy *политика укрепления позиций*

decision-**making** process *процесс принятия решений*

Наиболее типичным свойством инфинитива как глагола является его способность выражать характер действия (длительность, законченность) и залог.

В английском языке имеется шесть форм инфинитива, которые соответствуют четырем группам времен, два из которых имеют форму страдательного залога.

Do you expect **him to come**? – Ты полагаешь, что он придет?

Этот оборот употребляется после глаголов, выражающих:

- 1) желание и намерение: **to want, to wish, to desire, to intend, to mean;**

5) чувства и эмоции: **to like, to love, to hate, to dislike**.

На русский язык этот оборот переводится придаточным дополнительным предложением с союзами *что, чтобы, как*. Существительное или местоимение становится подлежащим, а инфинитив – сказуемым русского придаточного предложения. Indefinite Infinitive передается глаголом в настоящем (иногда в прошедшем) времени, Perfect Infinitive передается глаголом в прошедшем времени. To speculate about the future is one of the most basic qualities of man. It involves two aspects: one is to forecast what the future development will be and the other is to determine in what approximate period of time it is going to take place. To make such a prognosis means to learn from the past experience and to extrapolate the knowledge into the future. Recently, however, the rate of change has been so great as to make it difficult to learn from experience, at least as far as the time factor is concerned. To tell but one example, a prediction of man's possible landing on the Moon around the turn of the century was made as late as 1961, only 8 years before the actual event! So, to be on the safe side, we had better leave time to take care of itself, and concentrate our attention on what the future may be like.

There is yet another problem involved: are we to accept submissively any possible course of events, or are we to work for a future most suited for most people? The choice is to be made, at different levels, by every individual and by every society.

Сослагательное наклонение

Наклонение передает отношение говорящего к действию, выраженному сказуемым. Сослагательное наклонение трактует это действие как нереальное, т.е. желательное, необходимое, возможное.

В русском языке сослагательное наклонение выражается сочетанием глагола в прошедшем времени с частицей «бы», независимо от типа предложения.

В английском языке форма сослагательного наклонения зависит от типа придаточного предложения и подчинительного союза, вводящего данное предложение.

В английском языке употребляются следующие формы сослагательного наклонения:

1) П р о с т а я ф о р м а (синтетическая) совпадает с формами изъявительного наклонения за исключением:

а) глагол **to be** имеет форму **be** для всех лиц в Present Subjunctive;

б) все другие глаголы в 3-м лице единственного числа не имеют окончание **s**;

в) глагол **to be** в Past Subjunctive имеет форму **were** для всех лиц единственного и множественного числа.

2) С л о ж н а я ф о р м а (аналитическая) образуется путем сочетания вспомогательных глаголов **should**, **would** или модальных глаголов **can**, **could**, **may**, **might** с формой инфинитива (Indefinite или Perfect) без частицы **to**.

Сослагательное употребление употребляется:

1. **Условные предложения.** Чаще всего сослагательное наклонение употребляется в условных предложениях. В английском языке нереальное условие делится на нереальное условие, относящееся к настоящему или будущему, и нереальное условие, относящееся к прошлому.

If I **were** an electrician, I **should know** how to reduce the resistance of the conductor.
Если бы я был электриком, я бы знал, как снизить сопротивление проводника (условие относится к настоящему времени).

If he **had used** this formula he **would not have made** this mistake.
Если бы он применил эту формулу, он бы не сделал ошибки (нереальное условие, относится к прошедшему времени).

Придаточные предложения условия с формой **should** (для всех лиц) + **инфинитив** при переводе на русский обычно начинаются словами *в случае если бы*.

Should he **come** this way, I will speak to him. – *Если ему случится быть здесь, то я поговорю с ним.*

Трудность при переводе представляет также бессоюзное подчинение условных предложений с частичной или полной инверсией.

Had this policy **been adopted**, the subsequent history of the treaty might well have been quite different. – *Если бы такая политика была принята, последующая судьба этого договора вполне могла бы быть совершенно другой.*

2. В **придаточных подлежащих**, вводимых союзом **that**, после безличных оборотов типа *it is desirable, it is necessary* и т.п.

It is important that he **should give** his considerations on this subject.
Важно, чтобы он высказал свои замечания по этому вопросу.

3. В **дополнительных придаточных** предложениях, начинающихся с союза **that**, после глаголов, выражающих приказание, предположение: *to order, to demand* (приказывать, требовать), *to suggest, to propose* (предлагать, предполагать) и т.д.

He demanded that this machine **should be** carefully **examined**.
Он потребовал, чтобы его станок тщательно проверили.

It was necessary that the child's history **should be known** to none.
Надо было, чтобы историю этого ребенка никто не узнал.

I wish his project **were appreciated** by everybody.
Я хотел бы, чтобы все одобрили его проект.

4. В **обстоятельственных придаточных** предложениях:

а) образа действия, вводимых союзами **as if** как *если бы* и **as though** как *будто бы*;

б) цели, вводимых союзами **that, so that, in order to** для *того, чтобы* и **lest** *чтобы не*;

в) уступительных, вводимых союзами: **though, although** *хотя*, **whatever** *чтобы ни*, **whenever** *когда бы ни*, **however** *как бы ни*, **even if, even though** *даже (если бы)*.

She speaks as if she **were** a teacher.

Она говорит так, как будто она учитель

He closed the window lest he **should catch** a cold.

Он закрыл окно, чтобы не простудиться

Whatever you **should say**, I shall insist on my plan.

Что бы вы ни говорили, я буду настаивать на моем плане.

Why are frosts so important? Why does it matter more when the temperature falls below 0° Centigrade than when it falls below 20° or –20°? The answer is because water is the commonest substance which undergoes a change of state within the temperature range where human life is possible. If we could live at such temperatures, the boiling point of water would be equally important.

Ice is lighter than water. That is to say water expands when it freezes. It even starts to expand a little before it freezes. This has a number of consequences. If ice were heavier than water it would fall to the bottom of ponds and of the sea. Shallow ponds would freeze solid. So would the Arctic Ocean. And very likely there would be ice at the bottom of even the tropical oceans. In fact the whole earth would probably be a lot colder; and perhaps the Venus, which is a good deal warmer than the earth, would be a more suitable place for living beings.

Сложноподчиненные предложения

Сложноподчиненное предложение состоит из главного предложения и придаточного. Присоединяются придаточные предложения к главному союзными словами – местоимениями и наречиями **who, what, which, that, where, when**, а также подчинительными союзами **that, as, because, if**. Придаточные предложения могут присоединяться к главному и без союза.

The article **that** you read yesterday contains very important data.

Статья, которую вы вчера прочитали, содержит очень важные данные.

Некоторые сложноподчиненные предложения представляют значительную трудность при переводе. Рекомендуется следующий порядок разбора предложения:

1. Прежде всего необходимо найти главные члены предложения: сказуемое и подлежащее. Сказуемое определяется по наличию глагола в личной форме. Подлежащее предшествует ему. Анализ сложноподчиненного предложения нужно начинать с конца предложения. Определение количества грамматических подлежащих и согласованных с ними сказуемых помогает установить количество предложений.

2. Необходимо найти подчинительные союзы и союзные слова, так как они помогут выделить придаточные предложения и установить характер подчинительной связи предложения.

3. Далее следует выяснить, какие второстепенные члены имеются в главном и придаточном предложениях. После этого можно переходить к переводу сложноподчиненного предложения.

Наиболее трудными для анализа являются следующие сложноподчиненные предложения:

1. Предложения, в которых подлежащее выражено придаточным предложением. Оно вводится союзами **that, if, whether**, союзными словами **who, what, which, how, where, when, why**.

Whether the tax increase is the right solution is something some observers have recently begun to doubt.

Некоторые обозреватели в последнее время начали сомневаться, является ли увеличение налогов правильным решением вопроса.

2. Предложения, в которых предикативный член выражен придаточным предложением. Придаточное предикативное стоит после глагола-связки (чаще всего после **to be, to seem, to appear**). При переводе часто используется связующая частица *то* в соответствующем падеже, которая ставится перед союзом.

This trend in art is not really new. What is new is **that it has become the general tactics used by the artists now**.

Это направление в искусстве по существу не является новым явлением. Новым является то, что оно стало обычной тактикой, применяемой художниками в настоящее время.

Если придаточное предикативное предложение вводится союзом **whether**, то на русский язык такое придаточное предложение передается с помощью частицы *ли*.

The question is **whether** the EU members, especially Britain, are prepared to accept such state of affairs.

Вопрос заключается в том, готовы ли члены Европейского Союза, и в особенности Британия, согласиться с существующим положением дел.

3. Предложения с бессоюзным присоединением придаточного предложения. На русский язык такие предложения переводятся придаточными дополнительными предложениями, вводимыми союзом *что*, а придаточные определительные – союзными местоимениями *который, которая*.

The report the **teacher's delegation made on returning home** was listened to with great interest by the members of our department.

*Члены нашего отдела с большим интересом слушали доклад, **который** был сделан делегацией преподавателей по их возвращении на родину.*

Text 1.

Facts are cushions. Facts enlarge our expectations. Properly selected, facts are an early warning system that gets us ready for the future. Facts may also provide a pleasant preview of things to come. And facts bridge the gap between what we think and what really exists; between what we do and don't know; between the past, present and future. Facts about the future tell us the way things will work.

Future facts are systems-in-motion, services, processes or ideas – that are 1) at least one year away from mass market realization; 2) likely to “succeed” after they appear; 3) probably important future influences on the average man-in-the-street; 4) selected because they are probably “interesting” to read about. They are, in short, facts with a future.

Text 2.

To learn to think critically, you need to familiarize yourself with four fundamental principles that characterize the process. Each of these principles can be regarded as a thinking skill or a set of related thinking capabilities. Honing these skills takes time and practice, but you may be surprised how quickly you can start mastering them to your course work, practical problems that arise in daily living, and your personal beliefs about complex social issues.

The four main principles that underlie critical thinking are: 1) identifying and challenging underlying assumptions; 2) checking for factual accuracy and logical consistency; 3) accounting for the importance of context; 4) imagining and exploring alternatives. While we do not mean to suggest that this is an exhaustive list or that it is the only available strategy for learning critical thinking, these principles do lay a strong foundation for the critical evaluation of new information.

Text 3.

The problem was first recognized in the 19th century. Later an idea was suggested to apply it to practical things. Many possibilities for practical application were analyzed. Some of these were tested by experiment. The experimental results were not generally accepted, and the idea was discarded. Then other consequences were deduced and a new method proposed. Recently the model has been modified and is now being used in many practical situations.

Text 4.

“Would you like your son or daughter to become a scientist? If so, in what field?” The questions were asked by the Youth Section of the Literary Gazette and a British scientist was reported to answer them as follows.

“I would not like my son or daughter to become a scientist of the kind typical in the world today. The development of science has already led to many undesirable consequences and is likely to lead to many more unless great effort is made to control the application of scientific discoveries. If, however, science could be developed in a new way to become a meaningful social activity, I would be glad to see my son or daughter doing science.

So far as the field is concerned, I think there will be a growing tendency for scientists to occupy themselves with problems which affect fairly directly the lives of the people. There seems to exist a great need to develop science which deals specially with the problems of how the applications of science affect man. To cite but a few examples, there are such problems as urban development, education and, of course, the prevention of war. If the new knowledge about the world is used for the benefit of man, rather than for death and destruction, the human race can contribute to benefit from science for centuries to come.”

Text 5.

Recently much attention has been given to the study of this phenomenon. In this paper new experimental observations are presented and discussed. The data have been obtained assuming a new model of the mechanism involved, which was suggested in an earlier study by the author. The measurements have been carried out with a conventional apparatus slightly modified by the author. All possible sources of error are taken into account and consideration is given to the advantages and shortcomings of the present approach. The results are analyzed and the analysis is followed by a comparison of the data obtained with those available in literature. It is hoped that the disagreement may be accounted for by an improved experimental technique of the present investigation.

Fifty years from now the wonders of the Cosmic Age will have unfolded before the eyes of mankind. Several expeditions already will have gone to Mars and Venus and exploratory voyages will have been extended as far as Jupiter and Saturn and their natural satellites.

Voyages to the Moon will have become commonplace. Not unlikely the exploratory work presently going on in Antarctica, the surface of the Moon will have subdivided into spheres of interest by major powers, and much prospecting,

surveying, and even a limited amount of actual mining operations of precious ores and minerals will be conducted.

At some particularly suitable spots on the Moon housing structures will have been established. They may be operated for the purpose of “attracting” more traffic of scientists and explorers to man laboratories and observations.

The design of an automatic computer is not a simple matter. To understand how to use a computer one must fully appreciate its design. Therefore, a brief introduction to the logical design is necessary for the users to understand the underlying idea. To present some background material on theoretical and philosophical aspects of information processing is to give the user more profound understanding of computers' application. From what has been said above, it is clear that a computer may be thought of both as a machine by which to handle information and a machine by which to transform one set of symbols into another. For the user it is a machine to process the information, a way to obtain an output by applying to an input a specified sequence of logical operations. The designer considers a computer to be a device for applying a sequence of logic operations to symbols representing information.

Since mathematical operations are a particular group of logic operations, the consideration of logic operations by definition includes mathematical operations. To appreciate the significance of the conventional character of logic, and to gain some understanding of computer logical design we must consider a few simple games. These games are to illustrate some significant factors.

Men of science consider Lobachevsky to have strictly demonstrated and explained the principles of the theory of parallel lines. We consider him to be a great organizer of popular education, and we know him to have written much on the problems of education.

Lobachevsky was born on December 1, 1792 near Nizhniy Novgorod. His father died when he was only a child, leaving the family in extreme poverty. The family moved to Kazan where Lobachevsky was admitted to the gymnasium. We know his progress to have been extremely rapid in mathematics and classics. At the age of 14 he entered the University of Kazan where he is known to have spent 40 years as a student, assistant professor, and finally rector. Under his direction great improvements were made at the University. We know an observatory to have been founded and equipped and a mechanical workshop to have been established.

For 2200 years all the mankind believed Euclid to have discovered an absolute truth. Lobachevsky proved Euclid's axiom on parallel lines not to be true. He built a new geometrical theory quite different from that of Euclid. We know his ideas to

have greatly influenced not only geometry, but mechanics, physics, astronomy as well. Like Galileo, Copernicus and Newton he is one of those who laid the foundation of science.

Benjamin Franklin (1706-1790) is acknowledged to be the founder of the theory of atmospheric electricity. At the time when theories to explain electricity were neither complete nor well founded the lightning was proved by him to be an electrical phenomenon. He was not the first to think of it but he was the first to prove it. His theory of electricity still appears to hold good. He is acknowledged to have invented a means of protection against the disastrous effects of lightning – the lightning rod. Franklin's theory at first seemed to be misunderstood both in his country and abroad. It is known to have been severely attacked by the leader of French scientists abbot Nollet.

Franklin is recognized to have been a great public figure who did as much as he could for the good of his country. He is known to have been the editor of one of the newspapers enjoying a great popularity with his countrymen. He is sure to be one of the broadest as well as one of the most creative minds of his time.

To speculate about the future is one of the most basic qualities of man. It involves two aspects: one is to forecast what the future development will be and the other is to determine in what approximate period of time it is going to take place. To make such a prognosis means to learn from the past experience and to extrapolate the knowledge into the future. Recently, however, the rate of change has been so great as to make it difficult to learn from experience, at least as far as the time factor is concerned. To take but one example, a prediction of man's possible landing on the Moon around the turn of the century was made as late as 1961, only 8 years before the actual event! So, to be on the safe side, we had better leave time to take care of itself, and concentrate our attention on what the future may be like.

There is yet another problem involved: are we to accept submissively any possible course of events, or are we to work for a future most suited for most people? The choice is to be made, at different levels, by every individual and by every society.

What is the nature of the scientific attitude, the attitude of the man or woman who studies and applies physics, biology, chemistry or any other science? What are

their special methods of thinking and acting? What qualities do we usually expect them to possess?

To begin with, we expect a successful scientist to be full of curiosity – he wants to find out how and why the universe works. He usually directs his attention towards problems which have no satisfactory explanation, and his curiosity makes him look for the underlying relationships even if the data to be analyzed are not apparently interrelated. He is a good observer, accurate, patient and objective. Furthermore, he is not only critical of the work of others, but also of his own, since he knows man to be the least reliable of scientific instruments.

And to conclude, he is to be highly imaginative since he often looks for data which are not only complex, but also incomplete.

No country's history has been more closely bound to immigration than that of the United States. *The Founding Fathers*, especially Thomas Jefferson, were ambivalent over whether or not the United States ought to *welcome arrivals* from every corner of the globe. The author of America's Declaration of Independence wondered whether democracy could ever rest safely in the hands of men from countries *that revered monarchs* or replaced *royalty with mob rule*. However, few supported closing the gates to newcomers in *a country desperate for labour*.

By the mid-1840s millions of immigrants made their way to America as a result of a *potato blight* in Ireland and continual revolution in the German homelands. Meanwhile, a trickle of *Chinese immigrants* began to approach the American West Coast. Almost 19 million people *arrived* in the United States between 1880 and 1921, the year Congress first passed severe restrictions. Most of *these immigrants were* from Italy, Russia, Poland, Greece and the Balkans. Non-Europeans came, *too: east from Japan, south from Canada and north from Mexico*.

Native American education *got its start* more than a century ago through the US Bureau of Indian Affairs. But it *was vastly different* from the kind of education *currently taught* at 13 small schools *nation-wide* where the student body is more than two-thirds native American. Children *were taken* from their communities, *forced* to cut their hair, and *punished when they spoke* their native language. Today, American Indians who don't go to special schools *are faced* with different challenges. *Those living in cities are likely to go* to public schools where their cultural heritage *is rarely dealt with*, if at all. In *reservation schools*, which they may attend, the vast majority of teachers are not Indian.

Although Salinger was publishing stories as early as 1940, serious interest in his work was slight until *The Catcher in the Rye* (1951) occasioned a belated deluge of critical comment. In 1963 the “Salinger industry” (the term is George Steiner’s) reached its high-water mark, with almost 40 percent of the volume of the Faulkner’s industry – big business indeed. But a reaction had already set in. In that year the first book-length study of Salinger turned out to be disappointing in its critical judgment and strangely hostile toward Salinger himself. Many other critics had begun to scold him for an increasing social irresponsibility, obfuscation, and obsession with Eastern philosophy and religion, and for the narrow exclusiveness of his view of life – in short, for his failure to develop in directions which the critics could approve of. And the word used more and more to describe Salinger’s talent and achievement was “minor”. But the fact is that Salinger is not minor.

The founders and early leaders of the Chicago Public Library shared the ideas of the national public library movement. They believed the Library was an educational institution that should provide an opportunity for “mental improvement” to the citizens of Chicago. In the spirit of democracy, the Library was to be all encompassing: providing books and related reading material for popular education, civic awareness and scholarly research. The Board of Directors also saw the Library as the place “where working men and the youth of the city might employ their idle time” profitably in reading instead of wasting it in “haunts of vice and folly and places of ill reputation” that characterized the Chicago of the 1870s. Thus, education, recreation and the spirit of reform went hand in hand as the underlying objectives of the founding of the free Public Library in Chicago.

Till nearly the end of the fourteenth century, England was a purely agricultural country. Such manufactures as it possessed were entirely for consumption within the land; and for goods of the finer qualities it was dependent on importation from abroad. The only articles of export were the raw products of the country, and of these by far the most important was the agricultural product, wool. To understand, therefore, the life of rural England during this period, is to understand nine-tenths of its economic activity.

In the eleventh century, and long afterwards, the whole country, outside the larger towns, was divided into manors – into districts, that is to say, in each of which, called the *lord*, possessed certain important and valuable rights over all the other inhabitants. Sometimes one village was divided between two manors; sometimes part of a village formed a manor dependent on that from which it had been broken off; but such conditions were always exceptional, and are less frequent the further we go

back. The vast majority of manors consisted of but one village and the lands surrounding it cultivated by its inhabitants; and we may regard that as the normal state of things.

Chicago, by 1871, had grown from a small prairie settlement on the shore of Lake Michigan to a bustling metropolitan center in less than 40 years. Geographically situated as the hub of transportation and industry between the East and the West, Chicago had a growing population surpassing 300,000, making it the fifth largest city in the nation. Chicago was the youngest of the great cities in the country and had captured the imagination of the nation. Chicago, with its rapid growth and limitless energy, seemed to epitomize the potential of the new industrial age. Thomas Hughes, the well-known author of **Tom Brown's School Days**, was one of the many foreign visitors to Chicago. He described his impressions of the city in a letter written in September, 1870: "...This place is the wonder of the Wonderful West...it is one of the handsomest cities I ever saw, with 300,000 inhabitants and progressing at a rate of 1,500 a week."
